

The History of BitActive COIN.

August 2011 – Michael Glendale, one of the founders, buys his first bitcoins at around \$10 per bitcoin,

December 2013 overwhelmed by the success of the bitcoin, Michael Glendale sells a part of his stake in the bitcoin, and starts to actively trade the coins throughout the day, making huge profits.

June 2014 – With further development of the cryptocurrencies, Michael Glendale along with a team of developers develops a trading platform, robots, which actively and successfully trade cryptocurrencies automatically with a very little oversight and with huge profits.

October 2016 – It has been already 2 years since the robots had been running smoothly, posting very sizable profits for the work of Michael, and his team.

October 2016. A new Cryptocurrency BitActive is running in test mode on our servers, is created to exchange the profits and the value between a team of around 30-50 tech savvies, and like minded individuals worldwide.

March 2017 - The .team has incorporated improvements and various bug fixes into the BitAction Coin Platform.

October 2017 – It has been already a year, since our new CryptoNote platform has been running, and with help of different individuals a new ICO is scheduled to launch in March of 2017
